Note: For industrial batteries, starter batteries (SLI) and electric vehicle batteries (EV), the following applies: If the batteries are damaged upon delivery, additional charges may apply.
For portable batteries, the following applies: – Nickel-cadmium and nickel metal hydride batteries are always rechargeable – The price therefore corresponds to the environmental fee
– Alkaline and zinc-carbon batteries are never rechargeable. – The price therefore includes a +10% modulation
For industrial batteries and starter batteries (SLI) in the lead-acid category, a separate monthly price is issued under the same conditions as previously applied under ReturBat.
