

Intelligent Audiovisual System

Smart Software for Seamless Audio-Video Integration

Up to 99 Laia cameras

Full coverage of large spaces with automated multi-angle views and centralized control.

Up to 3 microphones

Automatically detect active speakers for clear audio and intelligent audiovisual management.

Speaker framing and tracking

Track the active presenter in real time, delivering dynamic, professional visuals—no operator needed.

Unique user experience

Multiple ways to connect and collaborate seamlessly in BYOD environments.

How IAVS® works

IAVS® works with professional microphones to pinpoint the speaker's location in the room. Using this data, our software automatically controls PTZ cameras to keep the speaker perfectly framed—even in motion—thanks to smart tracking and pre-configured presets.

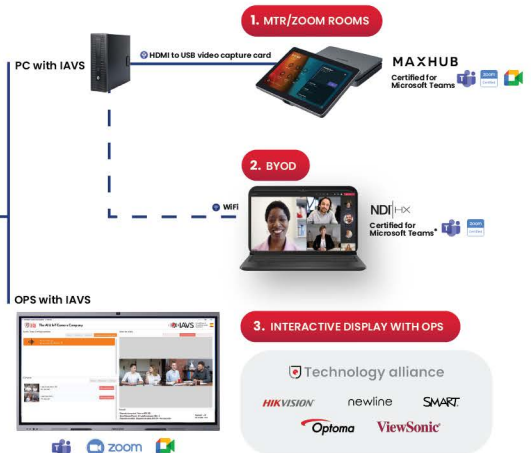

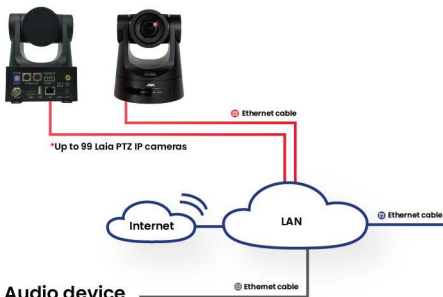

Seamlessly integrated with leading microphone brands such as **Audio-Technica, Biamp, Nureva, Sennheiser, and Shure**, IAVS® and Laia IP PTZ cameras deliver a fully automated, professional video experience. Additionally, IAVS® support **NDI®**, making remote production effortless.    

IAVS® can be installed to suit any meeting room, with your choice of topology: PC, interactive Windows screen with OPS, BYOD, or existing MTR/Room devices.

SETTING UP MODES

Laia cameras

*The user's cameras must support NDI, and the user needs to download the free NDI application on their device from the following link: <https://ndi.video/tools/studio-monitor/>
