

## **evolution wireless D1 app available now**

**Wedemark/Frankfurt, 5 April 2016 – At prolight+sound, Sennheiser is introducing an app for remotely controlling its evolution wireless D1 radio microphone systems. The WSR app converts iPad and iPhone into a handy remote control for digital D1 systems, assisting in the configuration, management and monitoring of radio links. The app is available from the Apple App Store as of now.**

“The free WSR app allows bands and musicians to conveniently control their D1 systems remotely,” said Martin Fischer, product manager for Sennheiser’s Live Performance & Music segment. “Whether setting up wireless systems or monitoring them during use – all it takes is a few simple flicks of the finger to change the settings of one device or entire groups.”

### **Getting ready for remote control**

The WSR app automatically recognizes whether D1 microphone systems have up-to-date firmware on board – and offers an update via the internet if required. Via the app, users can conveniently adjust the settings of individual units or entire groups, controlling audio effects, network settings and output signals on an iPhone or an iPad.

### **Walk testing a set-up**

The WSR app will also turn your iOS device into a signal tester: when walking the stage with the device and the D1 transmitter, the transmission quality of the radio link is displayed in real time.

### **Monitoring**

During a gig, the WSR app lets you keep track of the battery status, sound levels and signal strength to avoid any nasty surprises. To make monitoring even easier, the

iPad version allows you to include user photos for easy identification of the systems,

and to arrange the positions of the systems on screen to correspond to the band members' positions on stage.

"This app is a useful tool for all D1 users, and we hope they will benefit greatly from the ease of use and

convenience it offers," concluded Martin Fischer.

**Captions:**

*WSR app.jpg:* The Sennheiser WSR app enables you to remote-control your D1 wireless microphone systems via iPhone or iPad

*Walk test.jpg:* The app features a Walk Test Mode to check the signal strengths on stage

*Positioning.jpg:* Monitoring can be simplified by recreating the stage positions on the iPad. It is even possible to include photos of the band members.

Audio specialist Sennheiser is one of the world's leading manufacturers of headphones, microphones and wireless transmission systems. Based in Wedemark near Hanover, Germany, Sennheiser operates its own production facilities in Germany, Ireland and the USA and is active in more than 50 countries. With 19 sales subsidiaries and long-established trading partners, the company supplies innovative products and cutting-edge audio solutions that are optimally tailored to its customers' needs. Sennheiser is a family-owned company that was founded in 1945 and which today has 2,700 employees around the world that share a passion for audio technology. In 2014, the Sennheiser Group had sales totalling €635 million.
