

Application Note for TeamConnect Wireless (TC-W) and Skype for Business (S4B)

S4B Certification for TC-W:

TeamConnect Wireless works with Skype for Business (as with other UC platforms) without limitations. Microsoft changed the requirements for the S4B certification, due to the new category of “Skype Room System”. This follows the approach of a fixed, installed solution in dedicated rooms. Since this concept contradicts with the wireless, flexible concept for audio conferencing of TC-W, a certification is not possible.

Functionality:

USB: Full compatibility with S4B; Mute and volume is displayed on and synchronised between TC-W and S4B; USB button on TC-W for accepting, declining and hanging up calls.

BT: Compatible with S4B but no synchronisation of mute and volume display between TC-W and S4B; USB BT-Dongle BTD 800 (Art.-No. 504578) for PC recommended; BT button for accepting, declining and hanging up calls.

Jack: Audio only; No synchronisation; Jack button has no control capacities.

Note:

How to use the buttons for managing calls is displayed in the TC-W manual at page 18 to 21.
