

## Digital 6000

EM 6000 - Firmware version 2.1.9

SK/SKM 6000 - Firmware version 1.2.28

### Audinate Brooklyn II (Dante™ interface of EM 6000 DANTE) - Firmware Version 2.0.3.11

For conformity, consistency and compatibility reasons, we strongly recommend upgrading the system (EM 6000, SK 6000 & SKM 6000, Dante™ interface of EM 6000 DANTE) to the new release.

**Note for EM 6000 DANTE:** please update the EM 6000 firmware first, then update the firmware of the Dante™ interface.

**Note:** Dante firmware is available in two versions: **Device Type 1** (EM 6000 DANTE with one Dante port) and **Device Type 2** (EM 6000 DANTE with two Dante ports).

## Features

With the new firmware all EM 6000 receiver support monitoring and control with Yamaha™ CL and QL mixing consoles.

- ▷ RF, LQI and Audio levels plus battery status can be monitored directly on the console's screen, and the analog audio output level can be controlled from the surface.
- ▷ Yamaha™ users must update their CL and QL console firmware to new version V5.0, available on [www.yamahaproaudio.com](http://www.yamahaproaudio.com)
- ▷ Updated Frequency Auto Setup for revised A5-A8 US range, 550.000 – 607.900 MHz
- ▷ Due to new frequency regulations in the US and Canada, the SK(M) 6000 A5-A8 US transmission range must be limited to 550.000 – 607.900 MHz.
- ▷ We recommend all users update their SK(M) 6000 A5-A8 US firmware to version 1.1.28 for compliance in the US and Canada.

**Note:** This firmware update has no impact on other SK(M) devices and frequency ranges.

## Firmware update

- The Digital 6000 firmware update requires the Sennheiser Wireless Systems Manager software: [www.sennheiser.com/wsm](http://www.sennheiser.com/wsm)
- The Dante™ firmware update requires Audinate's Firmware Update Manager software: [www.audinate.com/products/firmware-update-manager](http://www.audinate.com/products/firmware-update-manager)
