An animated instruction manual can be viewed on the EM 300 G3 product page on our website at www.sennheiser.com.
Important safety instructions

- Read this instruction manual.
- Keep this instruction manual. Always include this instruction manual when passing the product on to third parties.
- Heed all warnings and follow all instructions in this instruction manual.
- Only clean the product when it is not connected to the mains. Use a cloth for cleaning.
- Refer all servicing to qualified service personnel. Servicing is required if the product has been damaged in any way, liquid has been spilled, objects have fallen inside, the product has been exposed to rain or moisture, does not operate properly or has been dropped.
- WARNING: To reduce the risk of short circuits, do not use the product near water and do not expose it to rain or moisture. Do not place objects filled with liquids, such as vases or coffee cups, on the product.
- Only use the supplied mains unit.
- Unplug the mains unit from the wall socket
  - to completely disconnect the product from the mains,
  - during lightning storms or
  - when unused for long periods of time.
- Only operate the mains unit from the type of power source specified in the chapter “Specifications” (see page 54).
- Ensure that the mains unit is
  - in a safe operating condition and easily accessible,
  - properly plugged into the wall socket,
  - only operated within the permissible temperature range,
  - not covered or exposed to direct sunlight for longer periods of time in order to prevent heat accumulation (see “Specifications” on page 54).
- Do not block any ventilation openings. Install the product in accordance with the instructions given in this instruction manual.
- Do not install the product near any heat sources such as radiators, stoves, or other devices (including amplifiers) that produce heat.
- Only use attachments/accessories specified by Sennheiser.
Important safety instructions

Overloading

Do not overload wall outlets and extension cables as this may result in fire and electric shock.

Replacement parts

When replacement parts are required, be sure the service technician uses replacement parts specified by Sennheiser or those having the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.

Danger due to high volumes

This product is capable of producing sound pressure exceeding 85 dB(A). 85 dB(A) is the sound pressure corresponding to the maximum permissible volume which is by law (in some countries) allowed to affect your hearing for the duration of a working day. It is used as a basis according to the specifications of industrial medicine. Higher volumes or longer durations can damage your hearing. At higher volumes, the duration must be shortened in order to prevent hearing damage. The following are sure signs that you have been subjected to excessive noise for too long a time:

- You can hear ringing or whistling sounds in your ears.
- You have the impression (even for a short time only) that you can no longer hear high notes.
Intended use

Intended use of the ew 300 G3 series products includes:

- having read these instructions especially the chapter “Important safety instructions”,
- using the products within the operating conditions and limitations described in this instruction manual.

“Improper use” means using the products other than as described in this instruction manual, or under operating conditions which differ from those described herein.
The EM 300 G3 rack-mount receiver

This receiver is part of the evolution wireless series generation 3 (ew G3). With this series, Sennheiser offers high-quality state-of-the-art RF transmission systems with a high level of operational reliability and ease of use. Transmitters and receivers permit wireless transmission with studio-quality sound.

Features of the evolution wireless 300 G3 series:
- Optimized PLL synthesizer and microprocessor technology
- **HDX** noise reduction system
- Pilot tone squelch control
- True diversity technology
- Switching bandwidth of 42 MHz
- Safe configuration of a multi-channel system via a network
- Scan function (Easy Setup) for scanning the frequency banks for unused channels

Areas of application

The receiver can be combined with the following optional components of the ew G3 series (see “Accessories and spare parts” on page 52):

<table>
<thead>
<tr>
<th>Receiver</th>
<th>Transmitters</th>
<th>Combinable with</th>
</tr>
</thead>
<tbody>
<tr>
<td>EM 300 G3</td>
<td>SK 300 G3</td>
<td>• Clip-on microphones: ME 2, ME 4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Headmic: ME 3</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Instrument/line cable: CI 1, CL 1</td>
</tr>
<tr>
<td>SKM 300 G3</td>
<td></td>
<td>• Interchangeable microphone heads: MMD 835-1, MMD 845-1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• MME 865-1</td>
</tr>
</tbody>
</table>
The EM 300 G3 rack-mount receiver

The devices are available in the same UHF frequency ranges and are equipped with the same frequency bank system with factory-preset frequencies. An advantage of the factory-preset frequencies is that

- a transmission system is ready for immediate use after switch-on,
- several transmission systems can be operated simultaneously on the preset frequencies without causing intermodulation interference.

The frequency bank system

The receiver is available in 6 UHF frequency ranges with 1,680 frequencies per frequency range:

<table>
<thead>
<tr>
<th>Range</th>
<th>Frequencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>516 – 558</td>
</tr>
<tr>
<td>B</td>
<td>566 – 608</td>
</tr>
<tr>
<td>C</td>
<td>626 – 668</td>
</tr>
<tr>
<td>D</td>
<td>734 – 776</td>
</tr>
<tr>
<td>E</td>
<td>780 – 822</td>
</tr>
<tr>
<td>F</td>
<td>823 – 865</td>
</tr>
</tbody>
</table>

Each frequency range (A–E, G) offers 26 frequency banks with up to 24 channels each:
Each of the channels in the frequency banks "1" to "20" has been factorypreset to a fixed frequency (frequency preset).

The factory-preset frequencies within one frequency bank are intermodulation-free. These frequencies cannot be changed.

For an overview of the frequency presets, please refer to the supplied frequency information sheet. Updated versions of the frequency information sheet can be downloaded from the EM 300 G3 product page on our website at www.sennheiser.com.

The frequency banks “U1” to “U6” allow you to freely select and store frequencies. It might be that these frequencies are not intermodulation-free (see page 46).
Delivery includes

The packaging contains the following items:
1. EM 300 G3 rack-mount receiver
2. NT 2-3 mains unit with one country adapter
3. 2 rod antennas
4. GA 3 rack adapter
5. 1 instruction manual
6. 1 frequency information sheet
7. 4 device feet
Product overview

Overview of the EM 300 G3 receiver

A Operating elements – front panel
1 Headphone output, ¼” (6.3 mm) jack socket ( )
2 Headphone volume control
3 syn button, backlit
4 Infra-red interface
5 Display panel, backlit in orange
6 Jog dial
7 STANDBY button with operation indication (red backlighting); ESC function (cancel)

B Operating elements – rear panel
8 Antenna input II (ANT II) with remote power supply input, BNC socket
9 Type plate
10 Antenna input I (ANT I) with remote power supply input, BNC socket
11 Audio output (AF OUT UNBAL), ¼” (6.3 mm) jack socket, unbalanced
12 Audio output (AF OUT BAL), XLR-3M socket, balanced
13 LED (yellow) for network activity indication
14 LAN socket (ETHERNET RJ 45)
15 Cable grip for power supply DC cable
16 DC socket (DC IN) for connection of NT 2-3 mains unit
Overview of the displays

After switch-on, the receiver displays the standard display “Receiver Parameters”. For further illustrations and examples of the different standard displays, please refer to page 25. This standard display displays the operating states of the receiver and provides the most important information on the received transmitter – provided the transmitter supports this function.

<table>

</tbody>
</table>
Putting the receiver into operation

Preparing the receiver for use

Recommendations for optimum reception

To ensure optimum reception even under difficult conditions, we recommend connecting remote antennas and, if necessary, using antenna splitters (see “Accessories and spare parts” on page 52).

When rack-mounting the receiver, you can mount the supplied antennas to the front of the rack by using an antenna front mount kit. When mounting more than one receiver into a rack, you should use remote antennas.

If you want to mount the receiver into a 19" rack:

► Read the corresponding chapter on page 14.

If you want to set up the receiver on a flat surface:

► Read the next chapter.

Setting up the receiver on a flat surface

CAUTION! Risk of staining of furniture surfaces!

Some furniture surfaces have been treated with varnish, polish or synthetics which might cause stains when they come into contact with other synthetics. Despite a thorough testing of the synthetics used by us, we cannot rule out the possibility of staining.

► Do not place the receiver on delicate surfaces.

Mounting the rack mount “ears”

The rack mount “ears” are designed to help protect the operating elements from damage or deformation, e.g. if the receiver is dropped. Therefore, fasten the rack mount “ears”, even if you do not want to rack mount your receiver.

To fasten the rack mount “ears”:

► Unscrew and remove the two recessed head screws (M4x8) on each side of the receiver (see left-hand diagram).
Putting the receiver into operation

- Secure the rack mount “ears” to the sides of the receiver using the previously removed recessed head screws (see right-hand diagram).

![Diagram of rack mount ears]

**Fitting the device feet**

1. Clean the base of the receiver where you want to fix the device feet.
2. Fit the device feet to the four corners of the receiver as shown.
3. Place the receiver on a flat, horizontal surface.

**Connecting the rod antennas**

The supplied rod antennas can be mounted quickly and easily and are suitable for all applications where – good reception conditions provided – a wireless transmission system is to be used without a large amount of installation work.

1. Connect the two rod antennas to the BNC sockets and at the rear of the receiver.

![Diagram of rod antennas]

- Align the rod antennas upwards in a V-shape.

**When using more than one receiver, we recommend connecting remote antennas and, if necessary, using Sennheiser antenna accessories. For more information, visit the ew G3 product page at www.sennheiser.com.**
Mounting the receiver into a 19" rack

**Do not fit the device feet when mounting the receiver into a 19" rack.**

**CAUTION! Risks when rack mounting the receiver!**

When installing the device in a closed or multi-rack assembly, please consider that, during operation, the ambient temperature, the mechanical loading and the electrical potentials will be different from those of devices which are not mounted into a rack.

> Make sure that the ambient temperature within the rack does not exceed the permissible temperature limit specified in the specifications (see page 54).

> Ensure sufficient ventilation; if necessary, provide additional ventilation.

> Make sure that the mechanical loading of the rack is even.

> When connecting to the power supply, observe the information indicated on the type plate. Avoid circuit overloading. If necessary, provide overcurrent protection.

> When rack mounting, please note that intrinsically harmless leakage currents of the individual mains units may accumulate, thereby exceeding the allowable limit value. As a remedy, ground the rack via an additional ground connection.

**Rack mounting one receiver**

> Secure the rack mount “ears” of the supplied GA 3 rack adapter to the receiver as described on page 12.

> Secure the blanking plate of the supplied GA 3 rack adapter to one of the rack mount “ears” using two recessed head screws (M 6x10).
Putting the receiver into operation

Connect the antennas. You have the following options:

- You can connect the supplied rod antennas 17 to the rear of the receiver (see page 13). In this case, insert the two blanking plugs 23 into the holes of the blanking plate (see diagram above).
- You can use the AM 2 antenna front mount kit (see “Accessories and spare parts” on page 52) and mount the rod antennas to the blanking plate 11 (see diagram below).

When using more than one receiver, we recommend connecting remote antennas and, if necessary, using Sennheiser antenna accessories. For more information, visit the ew G3 product page at www.sennheiser.com.
Putting the receiver into operation

To mount the receiver into a 19” rack:

► Slide the receiver with the mounted blanking plate 11 into the 19” rack.
► Secure the rack mount “ears” 20 to the 19” rack.

If you are using the supplied rod antennas:
► Align the antennas in a V-shape to obtain the best possible reception.

When rack mounting two receivers side by side, you can only front mount the antennas when using the ASA 1 antenna splitter in conjunction with the AM 2 antenna front mount kit and an additional GA 3 rack adapter (see “Accessories and spare parts” on page 52).

We recommend using remote antennas.

To mount the receivers into a rack using the GA 3 rack adapter:
► Place the two receivers side by side upside-down onto a flat surface.
► Secure the jointing plate 19 to the receivers using six recessed head screws (M 3x6).
► Secure the rack mount “ears” 20 to the receivers as described on page 12.
Putting the receiver into operation

To mount the antennas:

- Use remote antennas, if necessary in conjunction with the ASA 1 antenna splitter (see “Accessories and spare parts” on page 52).

To mount the receivers into the rack:

- Slide the receivers into the 19” rack.
- Secure the rack mount “ears” to the 19” rack.

Connecting an amplifier/mixing console

The receiver’s ¼” (6.3 mm) jack socket 1 and XLR-3M socket 2 are connected in parallel, allowing you to simultaneously connect two devices (e.g. amplifier, mixing console) to the receiver.

- Use a suitable cable to connect the amplifier/mixing console to the ¼” (6.3 mm) jack socket 1 or the XLR-3M socket 2.

For detailed information on balanced and unbalanced connection, please refer to the chapter “Connector assignment” on page 56.
Connecting receivers in a network

You can connect several receivers in a network. The receivers are remote controlled via a PC running the “Wireless Systems Manager” (WSM) software. This software will assist in the quick and safe configuration of multi-channel systems.

For further information on downloading the software, visit the ew G3 product page on our website at www.sennheiser.com.

► Connect a standard network cable (at least Cat 5) to the LAN socket of the receiver.
► Connect your receivers to an Ethernet switch.
► Additionally, connect a PC to the Ethernet switch as shown.

► Set up your multi-channel system as described on page 45.

The yellow LED at the rear of the receiver indicates the network activity:

<table>
<thead>
<tr>
<th>Yellow LED ...</th>
<th>Connection status</th>
</tr>
</thead>
<tbody>
<tr>
<td>... lit</td>
<td>Network cable connected to the Ethernet switch or PC</td>
</tr>
<tr>
<td>... off</td>
<td>No connection</td>
</tr>
</tbody>
</table>
Putting the receiver into operation

Connecting the mains unit

Only use the supplied NT 2-3 mains unit. It is designed for your receiver and ensures safe operation.

To connect the NT 2-3 mains unit:

➤ Connect the yellow connector of the mains unit 16 to the yellow socket 15 at the rear of the receiver.

➤ Pass the cable of the mains unit through the cable grip 15.

➤ Slide the supplied country adapter 17 onto the mains unit 16.

➤ Plug the mains unit 16 into a wall socket. The STANDBY button 7 is backlit in red.
Using the receiver

To establish a transmission link, proceed as follows:

1. Switch the receiver on (see next section).

2. Switch the transmitter on (see the instruction manual of the transmitter).
   The transmission link is established and the display backlighting of the receiver changes from red to orange.

   It is vital to observe the notes on frequency selection on page 44.

If you cannot establish a transmission link between transmitter and receiver:

► Make sure that transmitter and receiver are set to the same frequency bank and to the same channel.

► Read the chapter “Synchronizing transmitters with receivers” on page 44 and, if necessary, the chapter “If a problem occurs ...” on page 50.

Switching the receiver on/off

To switch the receiver on:

► Briefly press the STANDBY button 7.
   The receiver switches on and the “Receiver Parameters” standard display appears.
To switch the receiver to standby mode:

- Keep the STANDBY button 7 pressed until “OFF” appears on the display panel.
- The receiver switches to standby mode.

When in the operating menu, pressing the STANDBY button 7 will cancel your entry (ESC function) and return you to the current standard display.
- The STANDBY button 7 is backlit in red both during operation and in standby mode.

To completely switch the receiver off:

- Disconnect the receiver from the mains by unplugging the mains unit from the wall socket.
- The backlighting of the STANDBY button 7 goes off.

**Monitoring the audio signal via headphones**

---

**CAUTION!**

Danger of hearing damage!

Listening at high volume levels for long periods can lead to permanent hearing defects.

- Set the headphone volume control 2 to the minimum position before putting the headphones on.

---

- Set the headphone volume control 2 to the minimum position.
- Connect headphones with a ¼” (6.3 mm) stereo jack plug to the headphone output 3.
- Gradually increase the volume and monitor the audio signal with the lowest possible volume.
### Synchronizing a transmitter with the receiver

You can synchronize a suitable transmitter of the ew 300 G3 series with the receiver. If the receiver is in ex works condition, the following parameters are transferred to the transmitter during synchronization:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Transferred parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Frequency Preset”</td>
<td>Currently set frequency</td>
</tr>
<tr>
<td>“Name”</td>
<td>Freely selectable name currently set on the receiver</td>
</tr>
<tr>
<td>“Pilot Tone”</td>
<td>Current pilot tone setting of the receiver (“Inactive”/“Active”)</td>
</tr>
</tbody>
</table>

Via the “Sync Settings” submenu, you can adjust the parameters to be transferred to your transmitters (see page 39). It is vital to observe the notes on frequency selection on page 44.

To transfer the parameters:

1. Switch the transmitter and the receiver on.
2. Press the **sync** button ③ on the receiver. “Sync” appears on the display panel of the receiver.
3. Place the infra-red interface of the transmitter (see the instruction manual of the transmitter) in front of the infra-red interface ④ of the receiver.
   
   The parameters are transferred to the transmitter. When the transfer is completed, “✓” appears on the receiver’s display panel. The receiver then switches back to the current standard display.
To cancel the transfer:

- Press the STANDBY button on the receiver.
  “X” appears on the display panel of the receiver. “X” also appears if no suitable transmitter was found.

Deactivating the lock mode temporarily

You can activate or deactivate the automatic lock mode via the “Auto Lock” menu item (see page 37).

If the lock mode is activated, you have to temporarily deactivate it in order to be able to operate the receiver:

- Press the jog dial.
  “Locked” appears on the display panel.

- Turn the jog dial.
  “Unlock?” appears on the display panel.

- Press the jog dial.
  The lock mode is temporarily deactivated:

<table>
<thead>
<tr>
<th>When you are in the operating menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>The lock mode remains deactivated until you exit the operating menu.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>When one of the standard displays is shown</th>
</tr>
</thead>
<tbody>
<tr>
<td>The lock mode is automatically activated after 10 seconds.</td>
</tr>
</tbody>
</table>

The lock mode icon flashes prior to the lock mode being activated again.
**Using the receiver**

**Muting the audio signal**

To **mute** the audio signal:

- When one of the standard displays is shown on the display panel, press the **STANDBY** button. “**RX Mute On?**” appears on the display panel.

- Press the jog dial.
  
The audio signal is muted. “**RX Mute**” flashes in alternation with the current standard display. The display panel is backlit in red.

To **unmute** the audio signal:

- Press the **STANDBY** button. “**RX Mute Off?**” appears on the display panel.

- Press the jog dial.
  
The muting is canceled and the display backlighting changes from red to orange again.

If “**RX Mute On?**” or “**RX Mute Off?**” appears on the display panel but you do not wish to change the status of the muting function:

- Press the **STANDBY** button.
  
The status of the muting function remains unchanged and the current standard display appears.
Selecting a standard display

Turn the jog dial to select the standard display:

<table>
<thead>
<tr>
<th>Contents of the display</th>
<th>Selectable standard display</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Transmitter Parameters”**</td>
<td>(transmitter type/microphone, inverted display) displays the microphone head (SKM only) and the transmitter type</td>
</tr>
<tr>
<td>“Receiver Parameters”</td>
<td>appears after switch-on of the receiver and displays the receiver parameters (see page 10)</td>
</tr>
<tr>
<td>“Soundcheck” (display with additional function)</td>
<td>displays the signal quality within the transmission area (see page 31)</td>
</tr>
</tbody>
</table>

* The reading of the transmitter parameters can take up to 2 minutes. If you synchronize your transmitter with the receiver (see page 22), the parameters are read out without delay.
Using the operating menu

A special feature of the Sennheiser ew G3 series is the consistent, intuitive menu structure of transmitters and receivers. As a result, adjustments to the settings can be made quickly – even in stressful situations, for example on stage or during a live show or presentation.

The buttons

<table>
<thead>
<tr>
<th>Button</th>
<th>Function of the button</th>
</tr>
</thead>
</table>
| Press the STANDBY button   | • Switches the receiver on and off  
                              • Cancels the entry and returns to the current standard display (ESC function)  
                              • Mutes the receiver (special function, see page 24)                                                                                           |
| Press the jog dial         | • Changes from the current standard display to the operating menu  
                              • Calls up a menu item  
                              • Enters a submenu  
                              • Stores the settings and returns to the operating menu                                                                                     |
| Turn the jog dial          | • Selects a standard display (see page 25)  
                              • Changes to the next/previous menu item  
                              • Changes the setting of a menu item                                                                                                           |

Using the operating menu

**Working with the operating menu**

> If the lock mode is activated, you have to deactivate it in order to be able to work with the operating menu (see page 23).

By way of example of the “Frequency Preset” menu item, this section describes how to use the operating menu.

**Changing from a standard display to the operating menu**

- Press the jog dial.
  - The current standard display is replaced by the main menu.
  - The last selected menu item is displayed.

**Selecting a menu item**

- Turn the jog dial to change to the “Frequency Preset” menu item.
  - The current setting of the menu item is displayed:

```
Menu
Squelch
Easy Setup
Frequency Preset
Name
AF Out
Equalizer
Auto Lock
Advanced
Exit
```

**Changing and storing settings**

- Turn the jog dial to call up the menu item.
- Turn the jog dial to set the frequency bank.
- Press the jog dial to confirm your selection.
- Turn the jog dial to set the channel.
- Press the jog dial to store the setting.
Using the operating menu

**Canceling an entry**

- Press the **STANDBY** button to cancel an entry.
  - The current standard display appears on the display panel.

To subsequently return to the last edited menu item:

- Press the **STANDBY** button to cancel an entry.
  - The current standard display appears on the display panel.

**Exiting a menu item**

- Change to the “Exit” menu item.
- Confirm your selection.
  - You return to the next higher menu level.

To directly return to the current standard display:

- Press the **STANDBY** button.
Adjustment tips and functions

The operating menu allows you to make settings for your receiver and your transmitters. The “Soundcheck” standard display provides an additional function and can be called up by turning the jog dial, without having to get into the operating menu.

Doing a soundcheck

By doing a soundcheck, you can check the reception area for field strength gaps (“dropouts”) which cannot be compensated for by the receiver’s diversity circuitry.

The “Soundcheck” standard display must not be activated until later because otherwise the recording will give wrong results.

► If necessary, change from the “Soundcheck” standard display to one of the other standard displays of your receiver.

► Position the transmitter in the area in which it is to be used and switch it on.

► Leave the transmitter switched on and go to your receiver.

► On the receiver, change to the “Soundcheck” standard display.

► Go to your transmitter.

If no transmitter is being received or if the signal is below the squelch threshold level, “MUTE” appears on the display panel (see “If a problem occurs ...” on page 50).
Adjustment tips and functions

- With the transmitter, walk up and down the area in which it is to be used.
- Then leave the transmitter there and do **not** switch it off.

During the soundcheck, the receiver records the RF level and the AF level. The recording result is displayed on the “Soundcheck” standard display:

<table>
<thead>
<tr>
<th>Display</th>
<th>Meaning</th>
<th>What to do ...</th>
</tr>
</thead>
</table>
| RF Min  | Min. RF signal level: must be well above the squelch threshold level for one of the two antennas | ▶ Check if the antennas and the antenna cables are correctly connected.  
▶ Improve the position of the antennas.  
▶ If necessary, use antenna boosters. |
| RF Max  | Max. RF signal level: both antennas should reach 40 dBμV |  |
| AF Max  | Max. audio level | ▶ On your transmitter, adjust the audio level as high as possible without the level display for audio level showing full deflection (**AF Max** is at a level with the PEAK display). For more information, refer to the instruction manual of the transmitter. |

If only one or none of the diversity displays is displayed during the sound check:

- Check if the antennas are properly positioned or check the antenna cables.
The main menu “Menu”

Adjusting the squelch threshold

Adjustment range: 5 to 25 dB, adjustable in 2-dB steps, can be switched off.

The squelch eliminates annoying noise when the transmitter is switched off. It also suppresses sudden noise when there is no longer sufficient transmitter power received by the receiver.

Adjust the squelch threshold – with the transmitter switched off – to the lowest possible setting that suppresses hissing noise.

If you adjust the squelch threshold to a high value, the transmission range will be reduced under adverse RF reception conditions.

CAUTION! Danger of hearing damage and material damage!

If you switch the squelch off or adjust the squelch threshold to a very low value, loud hissing noise can occur in the receiver. The hissing noise can be loud enough to cause hearing damage or overload the loudspeakers of your system!

Always make sure that the squelch is switched on (see below).

Before adjusting the squelch threshold, set the volume of the headphone output (see page 21) and the audio output level (“AF Out”, see page 36) to the minimum.

Never change the squelch threshold during a live transmission.
The squelch should only be switched off for servicing purposes. With the squelch threshold set to “5 dB”, you switch the squelch off by turning the jog dial to the left and keeping it in this position for 3 seconds.

If you have accidentally switched off the squelch:

- Turn the jog dial to the right to switch the squelch on.

### Scanning for, releasing and selecting frequency presets

<table>
<thead>
<tr>
<th>Menu item</th>
<th>Function of the menu item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scan New List</td>
<td>Automatically scans for unused receiving frequencies (frequency preset scan). If receiving frequencies are used, they will be locked; if receiving frequencies are unused, they will be released. After the frequency preset scan, you can select an unused frequency preset.</td>
</tr>
<tr>
<td>Reset List</td>
<td>Releases all locked frequency presets</td>
</tr>
<tr>
<td>Current List</td>
<td>Selects an unused frequency preset</td>
</tr>
</tbody>
</table>

If you call up the “Scan New List” menu item, your receiver scans for unused frequency presets. After the scan, the receiver displays a list of the frequency banks and their unused channels. The frequency bank with the largest number of unused channels is automatically selected.
Adjustment tips and functions

To perform a frequency preset scan:

1. Call up “Easy Setup” menu item
2. Select and call up a frequency bank
3. Select the frequency bank and confirm
4. Select the channel; store the setting
5. The frequency preset scan is performed

You can call up the list containing the frequency banks again by selecting the “Current List” menu item.

Selecting the frequency bank and the channel

1. Call up “Easy Setup” menu item
2. Select the frequency bank and confirm
3. Select the channel; store the setting

When setting up multi-channel systems, please observe the following:

Only the factory-preset frequencies within one frequency bank (“1” to “20”) are intermodulation-free. It is vital to observe the notes on frequency selection on page 44.

Overview of the frequency banks and channels:

<table>
<thead>
<tr>
<th>Frequency bank</th>
<th>Channels</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>“1” to “20”</td>
<td>up to 24 per frequency bank</td>
<td>System bank: frequencies are factory-preset</td>
</tr>
<tr>
<td>“U1” to “U6”</td>
<td>up to 24 per frequency bank</td>
<td>User bank: frequencies are freely selectable</td>
</tr>
</tbody>
</table>
Adjustment tips and functions

Entering a name

Via the “Name” menu item, you can enter a freely selectable name (e.g. the name of the performer) for the receiver.

The name is displayed on the “Receiver Parameters” standard display and can consist of up to eight characters such as:

- letters (without pronunciation marks),
- numbers from 0 to 9,
- special characters and spaces.

To enter a name, proceed as follows:

1. Turn the jog dial to select a character.
2. Press the jog dial to change to the next segment/character or to store the complete entry.

Adjusting the audio output level

Adjustment range: –24 dB to +24 dB, adjustable in 3-dB steps

Via the “AF Out” menu item, you can adjust the level of the audio output AF OUT from the receiver to the input of the connected device. The following figures are a guide to the best settings:

<table>
<thead>
<tr>
<th>Connected device</th>
<th>Guide values for “AF Out”</th>
</tr>
</thead>
<tbody>
<tr>
<td>Line</td>
<td>0 to +18 dB (+24 dB)</td>
</tr>
<tr>
<td>Microphone</td>
<td>–24 dB to –6 dB</td>
</tr>
</tbody>
</table>

Gain values greater than +18 dB should only be used when the audio modulation from the transmitter is at a low level, otherwise the audio output of the receiver may become clipped and distorted.
To adjust a gain greater than +18 dB (gain reserve):

- Adjust a level of +18 dB.
- Turn the jog dial to the right and hold it in this position for 3 seconds. The next higher value (+21 dB) appears. The audio output level is increased. Using this gain reserve also increases the headphone output level.

**Using the equalizer**

Via the “Equalizer” menu item, you can change the treble and bass of the audio output signal.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Flat” (unchanged)</td>
<td>Output signal remains unchanged</td>
</tr>
<tr>
<td>“Low cut” (cuts)</td>
<td>Cuts the bass</td>
</tr>
<tr>
<td>“Low Cut/High Boost” (cuts and boosts)</td>
<td>Cuts the bass and boosts the treble</td>
</tr>
<tr>
<td>“High Boost”</td>
<td>Boosts the treble</td>
</tr>
</tbody>
</table>

**Activating/deactivating the automatic lock mode**

The lock mode prevents that the receiver is accidentally switched off or programmed during operation.

The lock mode icon  on the current standard display indicates that the lock mode is activated. For information on how to use the lock mode, refer to page 23.
Adjustment tips and functions

The extended menu “Advanced Menu”

To get into the extended menu “Advanced Menu”:
► From the main menu, select “Advanced”.

Setting the receiving frequencies and the frequency banks “U1” to “U6”

When you have selected one of the system banks and then select the “Tune” menu item, the receiver automatically switches to channel 1 of the frequency bank “U1”. In this case, “U1.1” briefly appears on the display panel.

Upon delivery, the channels of the frequency banks “U1” to “U6” are not assigned a receiving frequency.

Via the “Tune” menu item, you can set a receiving frequency to be stored in the current channel or you can select a different channel in one of the frequency banks “U1” to “U6” and assign this channel a receiving frequency.

It is vital to observe the notes on frequency selection on page 44.

Setting a receiving frequency for the current channel

► Turn the jog dial until the “Tune” menu item appears.

► Press the jog dial.
    The frequency selection appears.

► Set the desired frequency.

► Press the jog dial.
    Your settings are stored.
    You are back to the operating menu.
Setting a frequency bank and a channel and assigning this channel a receiving frequency

相对较长的提示和功能

1. Turn the jog dial until the “Tune” menu item appears.
2. Press the jog dial and keep it pressed until the frequency bank selection appears.
3. Set the desired frequency bank.
4. Press the jog dial. The channel selection appears.
5. Set the desired channel.
6. Press the jog dial. The frequency selection appears.
7. Set the desired frequency.
8. Press the jog dial. Your settings are stored.
9. You are back to the operating menu.

“Sync Settings”

Via the “SK Settings” and “SKM Settings” menu items, you can set the transmitter parameters directly on the receiver and activate or deactivate the transfer of these parameters to the transmitter:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Transfer is ...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensitivity</td>
<td>... activated</td>
</tr>
<tr>
<td>-69 dB</td>
<td></td>
</tr>
<tr>
<td>Sensitivity</td>
<td>... deactivated</td>
</tr>
<tr>
<td>-69 dB</td>
<td></td>
</tr>
</tbody>
</table>

By pressing the syn\(\text{p}\) button 3, you can transfer the parameters to the transmitters via the infra-red interface (see page 22).
Adjustment tips and functions

Activating/deactivating the pilot tone evaluation

The pilot tone supports the receiver’s squelch function and protects against interference due to RF signals from other devices.

The transmitter adds an inaudible signal, known as the pilot tone, to the transmitted signal. The receiver detects and evaluates the pilot tone.

### Receiver display

<table>
<thead>
<tr>
<th>Meaning</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>The pilot tone evaluation is deactivated.</td>
<td><img src="image1" alt="Deactivated Pilot Tone" /></td>
</tr>
<tr>
<td>The pilot tone evaluation is activated.</td>
<td><img src="image2" alt="Activated Pilot Tone" /></td>
</tr>
<tr>
<td>The pilot tone evaluation is activated and the receiver receives a pilot tone from a transmitter.</td>
<td><img src="image3" alt="Activating from Transmitter" /></td>
</tr>
</tbody>
</table>

### Display Function Settings/adjustment range

<table>
<thead>
<tr>
<th>Display</th>
<th>Function</th>

</tr>
</tbody>
</table>
Adjustment tips and functions

Devices of the ew 300 G1 series (generation 1) do not support the pilot tone function. Therefore, please observe the following when combining a radio microphone or receiver of the ew 300 G3 series (generation 3) with devices from an earlier evolution wireless generation:

<table>
<thead>
<tr>
<th>Transmitter</th>
<th>Receiver</th>
<th>Make sure to ...</th>
</tr>
</thead>
<tbody>
<tr>
<td>ew G3/ew G2</td>
<td>ew G3/ew G2</td>
<td>... activate the pilot tone function on both transmitter and receiver.</td>
</tr>
<tr>
<td>ew G3</td>
<td>ew G1</td>
<td>... deactivate the pilot tone function on the ew 300 G3 transmitter.</td>
</tr>
<tr>
<td>ew G1</td>
<td>ew G3</td>
<td>... deactivate the pilot tone function on the ew 300 G3 receiver.</td>
</tr>
</tbody>
</table>

Activating/deactivating warnings

Via the “Warnings” menu item, you can activate or deactivate different warning messages.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Warning message with color change on the current standard display</th>
<th>Trigger</th>
</tr>
</thead>
<tbody>
<tr>
<td>“AF PEAK”</td>
<td><img src="image" alt="AF PEAK" /></td>
<td>Audio overmodulation</td>
</tr>
<tr>
<td>“Low RF Signal”</td>
<td><img src="image" alt="Low RF Signal" /></td>
<td>RF signal is weak</td>
</tr>
<tr>
<td>“RF Mute”</td>
<td><img src="image" alt="RF Mute" /></td>
<td>RF signal is too weak or no RF signal</td>
</tr>
<tr>
<td>“TX Mute”</td>
<td><img src="image" alt="TX Mute" /></td>
<td>Transmitter is muted or no pilot tone</td>
</tr>
<tr>
<td>“RX Mute”</td>
<td><img src="image" alt="RX Mute" /></td>
<td>Receiver is muted</td>
</tr>
<tr>
<td>“Low Battery”</td>
<td><img src="image" alt="Low Battery" /></td>
<td>Charge status of the transmitter battery/the BA 2015 accupack is critical</td>
</tr>
</tbody>
</table>
Adjustment tips and functions

Adjusting the contrast of the display panel

You can adjust the contrast of the display panel in 16 steps.

Resetting the settings made in the operating menu

When resetting the settings made in the operating menu, only the selected settings for the pilot tone and for the frequency banks “U1” to “U6” remain unchanged. For an overview of the factory-preset default settings, refer to the supplied frequency information sheet.

Adjusting the network configuration

You can either automatically allocate or manually enter an IP address. This menu item also shows the receiver’s unique and unchangeable MAC address.

In order to ensure safe communication between receivers in multi-channel systems (see page 45), we recommend using automatic allocation of IP addresses.
Displaying the software revision

You can display the current software revision of the receiver.

▶ For information on software updates, visit the EM 300 G3 product page on our website at www.sennheiser.com.
Synchronizing transmitters with receivers

When synchronizing a transmitter with a receiver, please observe the following:

- Only use a transmitter and a receiver from the same frequency range (see the type plate on the transmitter and the receiver).
- Make sure that the desired frequencies are listed in the enclosed frequency information sheet.
- Make sure that the desired frequencies are approved and legal in your country and, if necessary, apply for an operating license.

Synchronizing a transmitter with the receiver – individual operation

Upon delivery, transmitter and receiver are synchronized with each other.

If, however, you cannot establish a transmission link between transmitter and receiver, you have to synchronize the channels of the devices:

- With the receiver, perform a frequency preset scan to scan the frequency banks for unused channels (“Scan New List”, see page 34). Then “Sync” appears on the display panel of the receiver.

- Synchronize a transmitter with the receiver via the infra-red interface (see page 22).
  This establishes a transmission link between the transmitter and the receiver.

Alternatively, you can set the channel on the transmitter manually:

- Make sure that you set the transmitter to the same frequency bank and the same channel as the receiver (see the instruction manual of the transmitter).
Synchronizing transmitters with receivers – multi-channel operation

Network operation

Combined with ew 300 G3 transmitters, ew 300 G3 receivers can form transmission links that can be used in multi-channel systems. In multi-channel operation, the receivers are remote controlled via a PC running the “Wireless Systems Manager” (WSM) software. For further information on downloading the software, visit the ew G3 product page on our website at www.sennheiser.com.

Advantages of controlling the receivers via the “Wireless Systems Manager” (WSM) software:
• Detailed overview of all receiving channels
• Remote control of all receivers in the network
• Combination of receivers of different frequency ranges (see page 6).

Operations

- Connect the receivers in a network (see page 18).
- Launch the “Wireless Systems Manager” (WSM) software.
- To scan for unused receiving frequencies and to configure the receivers, proceed as described in the instruction manual of the “Wireless Systems Manager” (WSM) software.
- Set the corresponding transmitter to the selected frequency bank and to the selected channel either by synchronizing the transmitter with the receiver (see page 22) or by setting the frequency bank and the channel manually (see the instruction manual of the transmitter). Your multi-channel system is now set up.

Operation without network

If you want to set up a multi-channel system without using the WSM, proceed as follows:
- Switch off all transmitters of your system that are to be automatically configured. Channels used by switched-on transmitters are displayed as “used”.

In order to ensure an intermodulation-free transmission, use the same frequency bank for all transmission links.
Synchronizing transmitters with receivers

- With one of the receivers, perform a frequency preset scan to scan the frequency banks for unused channels ("Scan New List", see page 34). Then “Sync” appears on the display panel of the receiver.

- Switch one of the transmitters on.

- Synchronize this transmitter with the receiver via the infra-red interface (see page 22). This establishes a transmission link between the transmitter and the receiver.

- Repeat for the remaining transmitter and receiver pairs as described above. Leave those transmitters switched on that are already linked to a receiver. Your multi-channel system is now set up.

Alternatively, you can set the channel on the transmitter manually:

- Make sure that you set the transmitter to the same frequency bank and the same channel as the receiver.
  For information on the setting options of the transmitter, refer to the instruction manual of the transmitter.

You can also freely select the receiving frequencies and store these frequencies in the frequency banks “U1” to “U6”.

- If you are using frequencies from the frequency banks “U1” to “U6”, it might be that the receiving frequencies are not intermodulation-free.

  To ensure that the desired frequencies are intermodulation-free:

  - Contact your Sennheiser partner (see www.sennheiser.com).

If you want to use the frequency banks “U1” to “U6”:

- Make sure to use receivers from the same frequency range (see page 6 and the type plates of the devices).

- Only use frequencies that are approved and legal in your country.

- Set each receiver to the same frequency bank (see page 38).
Synchronizing transmitters with receivers

- On one of the receivers, select a channel within this frequency bank (see page 38).
- Assign this channel one of the receiving frequencies (see page 38).
- Synchronize a transmitter with the receiver (see page 22).
  OR
- Manually set the transmitter to the same frequency bank, channel and frequency that you set on the receiver.
- Repeat for the remaining transmitters and receivers as described above.
Cleaning the receiver

CAUTION! Liquids can damage the electronics of the receiver!

Liquids entering the housing of the receiver can cause a short-circuit and damage the electronics.

- Keep all liquids away from the receiver.

- Before cleaning, disconnect the receiver from the mains.
- Use a cloth to clean the receiver from time to time. Do not use any solvents or cleansing agents.
## Recommendations and tips

### ... for optimum reception

- Transmission range depends to a large extent on location and can vary from about 10 m to about 150 m. There should be a “free line of sight” between transmitting and receiving antennas.
- If, with the EM 300 G3 receiver, reception conditions are unfavourable, you should use two remote antennas which are connected via antenna cable.
- To avoid overloading the receiver, observe a minimum distance of 5 m between transmitting and receiving antennas.
- Observe a minimum distance of 50 cm between receiving antennas and metal objects (such as cross members or reinforced-concrete walls). Align the antennas upwards in a V-shape.

### ... for multi-channel operation

- Each of the frequency banks “1” to “20” accommodates factory-preset receiving frequencies which are intermodulation-free. For possible frequency combinations, please refer to the supplied frequency information sheet.
- The channels in the frequency banks “U1” to “U6” can be assigned freely selectable frequencies (see page 38).
- When using several transmitters simultaneously, interference can be avoided by maintaining a minimum distance of 20 cm between two transmitters.
- Use accessories recommended by Sennheiser for multi-channel applications (see page 52).

</table>

### Type approvals

**In compliance with**

**Europe**

- EMC: [EN 301489-1/-9](#)
- Radio: [EN 300422-1/-2](#)
- Safety: [EN 60065](#)

**USA**

- [FCC](#): 47 CFR 15 subpart B

**Approved by**

**Canada**

- Industry Canada: RSS 123
- IC: 2099A-G3SKMEM
Specifications

**NT 2-3 mains unit**

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>

</tr>
<tr>
<td>Current consumption</td>
<td>max. 120 mA</td>
</tr>
<tr>
<td>Output voltage</td>
<td>12 V</td>
</tr>
<tr>
<td>Secondary output current</td>
<td>400 mA</td>
</tr>
<tr>
<td>Energy efficiency level</td>
<td>IV</td>
</tr>
<tr>
<td>Temperature range</td>
<td>10°C to +40°C</td>
</tr>
</tbody>
</table>

**In compliance with (NT 2-3)**

**Europe**
- **EMC**: EN 55022, EN 55024, EN 55014-1/-2
- **Safety**: EN 60065

**USA**
- **47 CFR 15 subpart B**

**Canada**
- **ICES 003**

The mains unit is certified in accordance with the legal safety requirements of Europe, the United States, Canada, Russia and Japan.

**Connector assignment**
