Important safety information

- Please read this instruction manual carefully and completely before using the product.
- Make the instruction manual easily accessible to all users at all times. Always include the instruction manual when passing the product on to third parties.
- Do not use the product in situations which require special attention (e.g. when performing skilled jobs).
- Always keep the product dry and do not expose it to extreme temperatures (normal operating temperatures: +5°C/+41°F to +45°C/+113°F).
- Use the product with care and store it in a clean, dust-free environment.
- Switch off the headset after use to conserve battery power.
- Only use the DW series * base station for charging DW series headsets fitted with the DW series rechargeable battery. Never try to charge other rechargeable batteries or non-rechargeable batteries in the DW series base station.
- Do not short-circuit the contacts of the product. Make sure that no metal objects (e.g. paper clips, hair pins, earrings) come into contact with the interfaces and contacts.
- Sennheiser Communications is not liable for damages resulting from the loss of connection due to a run flat battery, an old battery or exceeding the DECT transmission range.
- This equipment generates, uses and can radiate radio frequency energy and, if not used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.
- The DW series headsets contain magnets that generate a magnetic field which could cause interference with cardiac pacemakers and implanted defibrillators. Keep the DW series headsets at least 1.2” (3 cm) from cardiac pacemakers or implanted defibrillators!
- Protect your hearing from high volume levels.
- Only use the power supply units supplied by Sennheiser Communications.
- To reduce the risk of fire or electric shock, do not use the product near water and do not expose it to rain or moisture.
- Unplug the power supply unit from the wall socket
  – to completely disconnect the product from the mains power supply
  – during lightning storms or
  – when unused for long periods of time.
- Only operate the power supply unit from the type of power source specified in the chapter “Specifications” (see page 37).
- Ensure that the power supply unit is
  – in a safe operating condition and easily accessible,
  – properly plugged into the wall socket,
  – only operated within the permissible temperature range,

---

* The DW series comprises the following products: DW Office, DW Office USB, DW Pro1/Pro2, DW Pro1/Pro2 USB. The DW 800 is not part of the DW series.
– not covered or exposed to direct sunlight for longer periods of time in order to prevent heat accumulation (see “Specifications” on page 37).

• Do not operate the product near any heat sources.
• Only use attachments/accessories specified by Sennheiser Communications (see “Accessories” on page 36).
• Keep plastic wrap and plastic bags of the packaging out of reach of children – danger of suffocation!

Intended use

Intended use of the product includes
• having read this instruction manual, especially the chapter “Important safety information” on page 2,
• using the product within the operating conditions and limitations described in this instruction manual.

“Improper use” means using the product other than as described in this instruction manual, or under operating conditions which differ from those described herein.

Safety instructions for the Lithium-Polymer rechargeable batteries

If abused or misused, rechargeable batteries may leak. In extreme cases, rechargeable batteries may even present

- a heat hazard,
- a fire hazard,
- an explosion hazard,
- a smoke or gas hazard.

Please understand that Sennheiser Communications does not accept liability for damage arising from abuse or misuse.

<table>

The DW Pro1/Pro2 wireless headset system

The Sennheiser Communications DW Pro1/Pro2 is a wireless DECT headset system which is intended for professional call center and office use.

- Can be used with a fixed line phone or PC (VoIP)
- Quick link establishment between headset and base station
- Excellent sound quality in narrowband and wideband mode ensures optimum speech intelligibility
- Range of up to 180 m in free line of sight and up to 55 m indoors
- Two headset variants with padded headband and supra-aural ear cup(s):
  - variant Pro1 covers one ear (monaural)
  - variant Pro2 covers both ears (binaural) and offers best passive attenuation of ambient noise
- Flexible microphone boom for individual wearing comfort – allows wearing of the microphone on either the left or right-hand side
- Ultra Noise cancelling microphone for optimum speech intelligibility without annoying background noise
- Permits conference calls with up to 4 headsets
- Quick and easy pairing of a new headset
- Long battery operating time:
  - up to 12 hours of talk time in narrowband mode
  - up to 8 hours of talk time in wideband mode
  - up to 4 days of standby time
- Quick and convenient charging of the headset (1 hour)
- HeadSet software for convenient call control and headset management via a PC
- Headset can be integrated into existing DECT GAP systems

DECT

The Sennheiser Communications DW wireless headset system uses DECT radio technology. Due to a dynamic adjustment of the transmission power, the DECT technology offers an increased transmission range, minimized radiation exposure and has a good energy efficiency. Encrypted radio transmission provides maximum security for wireless communication.
Delivery includes

1 base station
1 headset with built-in rechargeable battery:
   – Pro1 variant: covers one ear (monaural)
   – Pro2 variant: covers both ears (binaural)
1 power supply unit
1 telephone cable
1 USB cable
1 safety guide (booklet with important safety information)
1 quick guide
1 CD ROM (including, among other things, the HeadSetup software and a detailed instruction manual as PDF)
Product overview

<td>75-100%</td>
<td>approx. 20 min</td>
</tr>
</tbody>
</table>

* during charging, each segment gets brighter in 5 steps

When the LED segment 1 flashes in rapid succession, the battery is almost flat. You have to recharge the battery within the next few minutes (see page 22).

Headset

LED HEADSET 4  Meaning
lights up blue  Charging mode
flashes blue slowly  Active link to base station
flashes red  Rechargeable battery is almost flat
if off  Standby mode
Headset is switched off
flashes blue/red  Setting mode/GAP pairing mode
Pairing of an additional headset to the base station
Putting the headset system into operation

Putting the base station into operation

You can use the headset system with your fixed line phone (Phone mode) and/or your PC (PC mode). The base station controls the wireless communication between the products.

Removing/attaching the cover

To remove the cover:

- Remove the cover 14 by inserting a finger into the recess as shown.

To attach the cover and to secure the connected cables:

- Replace the cover 14 to the rear of the base station (see diagram).
- Tilt the cover 14 upwards until it locks into place.
Connecting the base station to the mains power supply

The base station is ready for operation as soon as it is connected to the mains power supply.

- Connect the DC IN connector of the power supply unit to the DC IN socket.

- Plug the power supply unit into a wall socket. The LINK LED lights up red. The LED of the last used mode button (PHONE or PC) lights up white.

- When using the headset system only in PC mode, the power from the PC via the USB cable is sufficient to power the base station. For charging the rechargeable battery within the specified charging times (see page 22) and for use in Phone mode, the power supply unit is required.

Connecting the base station to a fixed line phone

If your telephone features a headset socket for connecting the electronic call control, please use this socket.

To connect the base station to a fixed line phone, choose one of the following options:

<table>
<thead>
<tr>
<th>Possibility</th>
<th>Connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>to a fixed line phone without headset socket</td>
</tr>
<tr>
<td>B</td>
<td>to a fixed line phone with headset socket</td>
</tr>
<tr>
<td>C</td>
<td>of an optional mechanical handset lifter (with connection possibilities A and B only)</td>
</tr>
<tr>
<td>D</td>
<td>to an optional electronic hook switch control (EHS)</td>
</tr>
</tbody>
</table>

- Choose your connection possibility and proceed as described under A, B, C or D on the following pages.

For additional information on the individual settings for the headset system via the DIP switch row, refer to page 20.
Putting the headset system into operation

A  Connection to a fixed line phone without headset socket

▶ Disconnect the handset cable from the telephone.
▶ Connect the handset cable to the Handset socket 🌐.
▶ Use the telephone cable 🌐 to connect the Phone socket 🌐 to the handset socket on the telephone.

▶ Set the DIP switch 🌐 #1 and #2 to the upper position.

B  Connection to a fixed line phone with headset socket

▶ Use the telephone cable 🌐 to connect the Phone socket 🌐 to the headset socket on the telephone.

▶ Set the DIP switch 🌐 #1 and #2 to the upper position.
You can also connect the HSL 10 mechanical handset lifter from Sennheiser Communications (see “Accessories and spare parts” on page 36):

- Connect the base station to the fixed line phone as described under A or B.
- Connect the handset lifter to the ACC socket on the base station.
- Connect the handset lifter to the fixed line phone as described in the instruction manual of the handset lifter.

If your telephone has a built-in electronic hook switch, supporting either the DHSG or the MSH standard, you require the corresponding connection cables. Other hook switch standards require suitable adapter cables which convert the control signals to the DHSG standard (see “Accessories and spare parts” on page 36).

### DHSG standard

- **DHSG cable**
  - e.g. Siemens, Aastra, Agfeo, etc.
- **DW Pro1/Pro2 DHSG setting**

### Other standards

- **Adapter cable**
  - e.g. Cisco, Avaya, Polycom
- **DW Pro1/Pro2 DHSG setting**

If your telephone has a built-in electronic hook switch supporting the DHSG or the any other hook switch standard (except for the MSH standard):

- Set the DIP switch #1 to the lower position.
- Set the DIP switch #2 to the upper position.
If your telephone has a built-in electronic hook switch supporting the MSH standard:

- Set the DIP switch #1 to the upper position.
- Set the DIP switch #2 to the lower position.

The necessary connection and adapter cables are available from your Sennheiser partner. For additional information, please visit our website at www.senncom.com/headsetselector.

Setting up the base station

- Place the base station at a minimum distance of 15 to 20 cm from the fixed line phone.

Connecting the base station to a PC

You can connect the headset system to a PC in order to use it for Internet telephone (VoIP) with softphones or multimedia applications.

- Use the USB cable to connect the PC socket to a USB socket of your PC.
  The operating system detects the USB audio device “Sennheiser DECT” and installs the necessary drivers.
Installing the HeadSetup software

The HeadSetup software enables the headset system to communicate with a wide variety of softphones and allows you to use the call control functions. Even without the HeadSetup software, the headset system can still be used as an audio input and output device.

Updates and additional information on the HeadSetup software can be found on our website at www.senncom.com/headsetup or via the update function of the software.

### Specifications (version 2.2)

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td>Skype</td>
</tr>
</tbody>
</table>

To install the HeadSetup software:

- Run the “HeadSetup USB version X.X.exe” file in the “HeadSetup” folder on the enclosed CD ROM.
- Follow the instructions of the install program.

Additional information and application hints can be found in the Help section of the software:

- Click the “Help ...” button.
Putting the headset into operation

The microphone boom of the Pro1/Pro2 headset can be swiveled, allowing the microphone to be worn on the left or right-hand side (see page 24).

Before using the headset for the first time, charge the rechargeable battery for at least 20 minutes (see page 22).

Labeling the headset

The name plate allows you to label the headset.

- Change the lettering of the name plate as shown.

The "Nameplate-template.pdf" PDF file included on the CD ROM allows you to create and print individual name plates.

Swapping the assignment of the AUDIO button

The assignment of the AUDIO button can be swapped depending on whether you wear the headset on the right or left ear. By default, the headset is configured for wearing on the right ear. Pushing the AUDIO button backwards increases the volume, pushing it forwards reduces the volume (see page 29).

To swap the assignment of the AUDIO button:

- Simultaneously press and hold the headset’s LINK button and AUDIO button for 5 seconds.
  The HEADSET LED flashes blue/red.
Push the AUDIO button 6 in the direction in which you want to increase the volume until the HEADSET LED 4 goes off. The headset switches to standby mode.

Testing the headset system in Phone mode and adjusting it

Testing the telephone connection

When PC mode is selected (the LED of the PC button 1 lights up white):

- Press the PHONE button 2 on the base station. The base station is set to Phone mode and the LED of the PHONE button 2 lights up white.

- Press either the LINK button 3 on the headset or the PHONE button 2 on the base station. A wireless link is established between the headset and the base station, the LINK LED 3 lights up blue and the HEADSET LED 4 flashes blue.

- Lift the handset (If a handset lifter is connected, it automatically lifts the handset). The system is correctly connected if you can hear a clear dial tone and if the other party can hear you at a comfortable level.

If the audio signal/dial tone is disturbed, adjust the audio signal (see page 18). If the other party cannot hear you well, adjust the microphone sensitivity (see page 18).
Putting the headset system into operation

Adjusting the audio signal/dial tone

- Set the ABC switch to A (default setting), B or C so that you can hear a clear dial tone in the headset.

Adjusting the microphone sensitivity

By default, the microphone volume control is set to between position 4 and position 5. This setting is suitable for most telephones and your voice gets reproduced at a good volume. To change the volume, adjust the microphone volume control accordingly.

- The microphone volume control only adjusts the microphone sensitivity in Phone mode.
- Make a call to someone who will help you find the correct sensitivity setting for your microphone (see page 25).
- Turn the microphone volume control so that the other party can hear at a comfortable level.
Putting the headset system into operation

Testing the headset system in **PC** mode and adjusting it

**Testing the PC connection**

When **Phone** mode is selected (the LED of the PHONE button ![1](image) lights up white):

- Press the PC button ![1](image) on the base station.
  The base station is set to **PC** mode and the LED of the PC button ![1](image) lights up white.

- Press either the **LINK** button ![3](image) on the headset or the PC button ![1](image) on the base station.
  A wireless link is established between the headset and the base station, the **LINK** LED ![1](image) lights up blue and the **HEADSET** LED ![4](image) flashes blue.

- Use your softphone to make a call to someone who will help you adjust the correct microphone sensitivity for **PC** mode (see below).
  The system is correctly connected if the other party can hear you at a comfortable level.

**Adjusting the microphone sensitivity**

- Depending on the operating system used, adjust the microphone sensitivity so that the other party can hear you at a comfortable level (see the instruction manual of your operating system).

  Some softphones provide automatic adjustment of the microphone sensitivity. If possible, activate this function in order to be able to use the headset microphone to the full.
Putting the headset system into operation

Adjusting advanced settings

The DIP switch row allows you to adjust the headset system to your individual needs. By default, all DIP switches are set to the upper position.

To change the settings of the DIP switch row:

- If necessary, disconnect an existing wireless link between base station and headset (see page 23).

- Use a pointed object (e.g. a pen) to set the DIP switches to the desired position.

Configuring the handset lifter/hook switch – DIP switch 1 and 2

<td>Standard limitation</td>
</tr>
</tbody>
</table>
| ![Limited volume](image) | Limited volume (country specific)  
- EU and US version: in compliance with Directive 2003/10/EC |
Using the headset system

Charging the headset rechargeable battery

If you charge the rechargeable battery for the first time, allow charging for at least 20 minutes without interruption. A complete charging process takes about 60 minutes. You can interrupt charging at any time without damaging the rechargeable battery.

Operating time with a fully charged rechargeable battery:

<table>
<thead>
<tr>
<th>Talk time/standby time</th>
<th>Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>12 hours</td>
<td>narrowband mode (see page 21)</td>
</tr>
<tr>
<td>8 hours</td>
<td>wideband mode (see page 21)</td>
</tr>
<tr>
<td>4 days</td>
<td>standby mode</td>
</tr>
</tbody>
</table>

To charge the rechargeable battery of the Pro1/Pro2 headset:

- Place the headset into the magnetic holder of the base station. The HEADSET LED lights up blue and the CHARGE STATUS LED indicates the battery charge:

<table>
<thead>
<tr>
<th>LED segment*</th>
<th>Battery charge</th>
<th>Required charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0-25%</td>
<td>approx. 10 min</td>
</tr>
<tr>
<td>2</td>
<td>25-50%</td>
<td>approx. 10 min</td>
</tr>
<tr>
<td>3</td>
<td>50-75%</td>
<td>approx. 20 min</td>
</tr>
<tr>
<td>4</td>
<td>75-100%</td>
<td>approx. 20 min</td>
</tr>
</tbody>
</table>

* during charging, each segment gets brighter in 5 steps
After completion of the charging process, the HEADSET LED goes off.

To stop the charging process:

- Take the headset out of the base station. The CHARGE STATUS LED indicates the remaining battery charge of the headset.
When the battery is about to run flat ...
... only the LED segment 1 lights up weakly or flashes (see page 9).
... the HEADSET LED \( \frac{4}{5} \) flashes red.
... you hear a low battery warning (three beeps) in the headset.
... you have several minutes of battery reserve.
  When the battery is flat, the headset switches off.

If the headset is outside the range of the base station, it will switch off after 30 minutes in order to conserve battery power.

### Switching the headset on/off

If you place the headset into the base station, the headset automatically switches to standby mode. In standby mode, the power consumption is very low and the radiated power is reduced to a minimum. The HEADSET LED \( \frac{4}{5} \) lights up blue during charging.

#### Switching the headset on

- Press and hold the LINK button \( \frac{5}{6} \) for 5 seconds.
  The HEADSET LED \( \frac{4}{5} \) flashes blue 3 times and the wireless link to the base station is established (where required). An ascending confirmation beep is heard in the headset.

#### Switching the headset off

- Press and hold the LINK button \( \frac{5}{6} \) for 5 seconds.
  The HEADSET LED \( \frac{4}{5} \) flashes red 3 times.

### Establishing a wireless link between headset and base station

To establish a wireless link between headset and base station:

- Press the LINK button \( \frac{5}{6} \) on the headset.
  The link is established. The LINK LED \( \frac{4}{5} \) lights up blue and the HEADSET LED \( \frac{4}{5} \) flashes blue.

To disconnect a wireless link between headset and base station:

- Press the LINK button \( \frac{5}{6} \) on the headset.
  The link is disconnected. The LINK LED \( \frac{4}{5} \) and the HEADSET LED \( \frac{4}{5} \) go off.
You can also establish or disconnect the wireless link by pressing the PC button ① or the PHONE button ③ on the base station (depending on the selected mode (PC or Phone), see page 28).

If your telephone has a built-in electronic hook switch supporting the MSH standard (see page 13), you can only disconnect the wireless link between headset and base station by placing the headset into the base station. The control signals (“accept a call”, “end a call”) of the headset are still transmitted to the electronic hook switch without any restrictions.

Putting the headset on and adjusting it

- Rotate the microphone boom as shown.
- Carefully bend the flexible microphone boom so that the microphone ① points towards your mouth. Maintain a distance of about 0.8-1.2″ (2-3 cm) between the microphone and the corner of the mouth.

If you are using the Pro1 headset:
- Put on the headset so that the ear pad ⑨ rests comfortably on your left or right ear and that the headband ⑦ runs over the top of your head.

If you are using the Pro2 headset:
- Put on the headset so that the ear pads ⑨ rest comfortably on your ears.
Calling via the fixed line phone using the headset

**Accepting an incoming call**

You hear the ring tone of the fixed line phone:

- Put on the headset and establish a wireless link between headset and base station (see page 23). If you are using a handset lifter/electronic hook switch, the call is automatically accepted.

If you receive a call and a handset lifter/electronic hook switch with ring tone detection is used, you hear a ring tone in the headset and the LED of the PHONE button flashes white.

If you are not using a handset lifter/electronic hook switch:

- Accept the call by lifting the handset or by pressing the “accept call” button on your fixed line phone.

**Making a call**

If you are using a handset lifter/electronic hook switch:

- Dial the desired number.
- Put on the headset and establish a wireless link between headset and base station (see page 23). The phone connection is established automatically.

If you are not using a handset lifter/electronic hook switch:

- Put the headset on and establish a wireless link between headset and base station (see page 23).
- Lift the handset and dial the desired number. The phone connection is established.
Using the headset system

Ending a call

▶ Disconnect the wireless link between headset and base station (see page 23).
   If you are using handset lifter/electronic hook switch, the call is automatically ended.

   ![Image of headset and base station]

If you are not using a handset lifter/electronic hook switch:

▶ Hang up the handset or press the “end call” button on your fixed line phone.

   ![Image of headset and handset]

Transferring a call from the headset to the fixed line phone and vice versa

This function is only available if you are not using a handset lifter/electronic hook switch or if your telephone supports this function.

If a wireless link is established (see page 23):

▶ Speak into the headset.

If no wireless link is established (see page 23):

▶ Speak into the handset.

Calling via the PC using the headset

Accepting an incoming PC call

If you receive a call on your softphone:

▶ Establish a wireless link between headset and base station (see page 23).
   If the call control function of your softphone is supported, the call is automatically accepted (see page 15).

If your softphone does not support call control:

▶ Accept the call using your softphone.

   ![Image of computer and headset]

If you receive a call and the call control function of your softphone is supported by the HeadSetup software (see page 15), you hear a ring tone in the headset and the LED of the PC button flashes white.
Making a PC call

- Establish a wireless link between headset and base station (see page 23).
- Make the call using your softphone.

Ending a PC call

- Disconnect the wireless link between headset and base station (see page 23).
  - If the call control function of your softphone is supported, the call is automatically ended (see page 15).

  If your softphone does not support call control:
  - End the call using your softphone.

Reproducing PC audio via the headset

The HeadSetup software allows you to listen to all PC audio via the headset.

To activate/deactivate the reproduction of PC audio via the headset:

- In the HeadSetup software, activate/deactivate the “Always Audio” function by clicking the corresponding button. All PC audio is permanently reproduced via the headset. The wireless link between headset and base station remains permanently established.

If the “Always Audio” function is deactivated, the icon on the button is crossed out in red.
If the “Always Audio” function is activated, you can still accept calls via the Phone mode. After ending the call, the base station automatically switches back to PC mode and all PC audio is reproduced via the headset.

Switching between Phone and PC mode

You can switch between Phone and PC mode and accept calls of the other mode.

- Press the PC button 1 or the PHONE button 3 on the base station to select the desired mode.
  The LED of the PC button 1 or the LED of the PHONE button 3 lights up white, indicating the selected mode.

Holding a conference call

The headset system allows you to hold a conference call with up to 4 headsets. The master headset is used to control the conference call and up to 3 additional guest headsets can participate in the conference call.
To start the conference call using the master headset:

- Establish a wireless link between headset and base station (the LINK LED 4 flashes blue).

To add a guest headset to the conference call:

- Place the guest headset to be added to the conference call into the base station of the master headset.
  The HEADSET LED 4 flashes blue/red and the headset pairs to the base station. If pairing was successful, the HEADSET LED 4 lights up blue.
- Take the guest headset out of the base station.
  You hear a beep in the master headset.
- Press the LINK button 5 on the master headset within 15 seconds.
  The guest headset is enabled for the conference call.
- If necessary, repeat this procedure for the two other guest headsets.
- Call the other party.

To exit the conference call with a guest headset:

- Press the LINK button 5 on the guest headset.

To end the conference call:

- Use the master headset to end the conference call.
  The wireless links to all other headsets participating in the conference call are disconnected.

You can only end the conference call using the master headset. Other functions such as volume adjustment and muting the headset’s microphone can still be performed on each headset.

### Adjusting the volume

**WARNING** Hearing damage due to high volumes!

- Listening at high volume levels for long periods can lead to permanent hearing defects.
  - Set the volume to a medium level.
  - Do not continuously expose yourself to high volumes.

In order to be able to adjust the volume of the ring tone and the acoustic signals, the headset has to be in standby mode. In order to be able to adjust the audio volume, a wireless link has to be established between headset and base station (see page 23).

In PC mode, you can adjust the volume using the AUDIO button 6 or by using the volume control of your operating system (see the instruction manual of your operating system).
The volumes can be adjusted in several steps. When the minimum or maximum volume is reached, you hear a double beep in the headset.

- To increase or reduce the volume step-by-step, push the AUDIO button \( \text{Vol} - \) backwards or forwards.

The assignment of the AUDIO button \( \text{Vol} + \) can be swapped depending on whether you wear the headset on the right or left ear (see “Swapping the assignment of the AUDIO button \( \text{Vol} + \)” on page 16).

**Muting the headset’s microphone**

To mute the headset’s microphone during a call (the LINK LED \( \text{MUTE Mic} \) on the base station lights up blue):

- Press the AUDIO button \( \text{Vol} + \).
  The microphone is muted. While the microphone is muted, you hear a beep in the headset every 5 seconds and the LINK LED \( \text{Vol} - \) on the base station flashes red.

To unmute the headset’s microphone:

- Press the AUDIO button \( \text{Vol} - \) again.
  You hear a low confirmation beep in the headset.

  or

- Disconnect the wireless link between headset and base station (see page 23).
  In both cases, the muting is canceled and the LINK LED \( \text{MUTE Mic} \) lights up blue again or goes off.

**Using the advanced functions**

**Pairing additional headsets for shared use**

You can use one DW series base station with different DW series headsets. This can be advantageous if you share a telephone workplace. The last headset paired to the base station can be used without more ado.

If no wireless link is established between headset and base station:

- Place the additional headset into the magnetic holder of the base station.
  During pairing of the headset to the base station, the HEADSET LED \( \text{Vol} + \) flashes blue/red. If pairing was successful, the HEADSET LED \( \text{Vol} - \) lights up blue. You can now use the newly paired headset.

\* The DW series comprises the following products: DW Office, DW Office USB, DW Pro1/Pro2, DW Pro1/Pro2 USB. The DW 800 is not part of the DW series.
Pairing the headset to third party DECT GAP telephones

- Place the DW Pro1/Pro2 headset at a maximum distance of 1 m from the third party base station.

- Simultaneously press and hold the headset's LINK button and AUDIO button for 5 seconds. The headset switches to setting mode/GAP pairing mode and the HEADSET LED flashes blue/red.

- Set the third party base station to GAP pairing mode (see the instruction manual of the third party base station). The headset pairs to the third party base station. If pairing was successful, the HEADSET LED goes off.

The standard code for DW Pro1/Pro2 is “0000”.

Pairing is not successful

If pairing is not successful within 60 seconds, the DW Pro1/Pro2 headset switches to standby mode.

- For information on how to pair the headset to the third party base station, refer to the instruction manual of the base station.

Charging an additional headset

If you wish to charge an additional headset (headset b) in the base station while you are using your headset (headset a):

- Make sure that a wireless link is established between headset a and base station (the LINK LED on the base station lights up blue).

- Place headset b into the base station. Headset a can continue to connect to and disconnect from the base station and its use is not restricted while headset b is being charged.

If you leave the DECT range

If you leave the DECT range during a call, the audio quality deteriorates. When the link breaks down completely, you hear a descending sequence of beeps in the headset and the LINK LED on the base station lights up red.

To resume the call:

- Re-enter the DECT range of the headset system within 60 seconds. As soon as the headset re-establishes the wireless link to the base station, you hear a ring tone in the headset.

- Press the LINK button on the headset to resume the call.

If you are using a handset lifter/electronic hook switch or if your softphone supports call control, the call will automatically be ended 60 seconds after leaving the DECT range.
Cleaning and maintaining the headset system

**CAUTION** Damage to the product due to liquids!
Liquids entering the product can short-circuit the electronics or damage the mechanics. Solvents or cleansing agents can damage the surface of the product.
- Keep all liquids far away from the product.
- Do not use any solvents or cleansing agents.

- Before cleaning, switch the product off and disconnect the base station from the mains.
- Only use a dry and soft cloth to clean the product.
- Clean the charging contacts ② of the base station and the charging contacts ⑩ of the headset from time to time using e.g. a cotton swab.

Replacing the ear pad(s)

You can replace the ear pad(s). Spare ear pads are available from your Sennheiser partner.

- Carefully remove the old ear pad ⑨.
- Attach the new ear pad to the ear cup by pressing firmly around the ear pad until you hear it lock into place.
Replacing the headset’s rechargeable battery

You can replace the rechargeable battery. Spare rechargeable batteries are available from your Sennheiser partner. Only use spare rechargeable batteries recommended by Sennheiser Communications.

---

**CAUTION** Damage to the product due to improper handling

The cable connections can be damaged when subjected to mechanical stress.

- Open the battery compartment cover (8) and carefully loosen the connector plug of the rechargeable battery.

---

**Pro1 headset**

- Open the battery compartment cover (8) using your finger nail.
- Remove the rechargeable battery and carefully loosen the connector plug of the battery cable.
- Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.
- Replace the battery compartment cover (8) onto the headset. The battery compartment cover (8) locks into place.
- Charge the new rechargeable battery (see “Charging the headset rechargeable battery” on page 22).
Cleaning and maintaining the headset system

Pro2 headset

- Carefully remove the ear pad 9 from the ear cup where the battery compartment 8 is located.
- Open the battery compartment cover 8 using your finger nail (see first diagram).
- Remove the battery compartment cover 8.
- Remove the rechargeable battery and carefully loosen the connector plug of the battery cable.
- Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.
- Replace the battery compartment cover 8 onto the ear cup. The battery compartment cover 8 locks into place.
- Reattach the ear pad to the ear cup by pressing firmly around the ear pad until you hear it lock into place.
- Charge the new rechargeable battery (see “Charging the headset rechargeable battery” on page 22).

Accessories

- HSL 10 handset lifter
  - mechanical handset lifter
  - incl. ring tone detection
  - supports nearly all standard desktop telephones
- DHSG cable
  - electronic hook switch cable
  - for e.g. Siemens, Aastra, etc.
- MSH cable
  - electronic hook switch cable
  - for e.g. Alcatel, etc.
- Adapter cables for manufacturer specific standards
  - available for Cisco, Avaya, Polycom, etc.

Spare parts

- Ear pads (2 pieces)
- Name plate holder
- Windshield
- Rechargeable battery
- Telephone cable
- Micro-USB cable
- Power supply unit, EU version
- Power supply unit, UK version
- Power supply unit, US version
- Power supply unit, AUS version

Manufacturer Declarations

Warranty

Sennheiser Communications A/S gives a warranty of 24 months on this product.

For the current warranty conditions, please visit our web site at www.senncom.com or contact your Sennheiser partner.

In compliance with the following requirements

- RoHS Directive (2002/95/EC)

Please dispose of this product at the end of its operational lifetime by taking it to your local collection point or recycling center for such equipment.

- Battery Directive (2006/66/EC)

The supplied rechargeable battery can be recycled. Please dispose of it as special waste or return it to your specialist dealer. In order to protect the environment, only dispose of exhausted rechargeable batteries.

CE Conformity

- CE 1321
- Low Voltage Directive (2006/95/EC)

The declarations are available at www.sennheiser.com.

Before putting the product into operation, please observe the respective country-specific regulations!

Statements regarding FCC and Industry Canada

This equipment complies with Part 15 of the FCC Rules and with RSS-213 of Industry Canada. Operation is subject to the following two conditions: (1) this equipment may not cause harmful interference, and (2) this equipment must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

This class B digital equipment complies with the Canadian ICES-003

Changes or modifications made to this equipment not expressly approved by Sennheiser electronic Corp. may void the FCC authorization to operate this equipment. Before putting the equipment into operation, please observe the respective country-specific regulations!

Since the radiated output of this device is far below the FCC radio frequency exposure limits, it is not subjected to routine RF exposure evaluation as per Section 2.1093 of the FCC rules.

**Trademarks**
